

Jacob Hershchysky

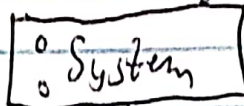

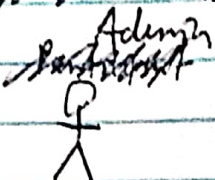

1. The only change to the Domain Class Module is to add ^{two} new attributes to the Race class that represent a unique name ^{and} id, e.g.

2 new attributes

The Use Case model will not need to change that much either. The diagram should stay the same, but the specifications for Register for Race and Add Race will need to indicate that ^{a)} Admin is informed when participants register for race and ^{b)} the option to add obstacles comes after the races created. ~~In summary, the specification, not the diagram,~~ must change to include more scenarios.

2.

Add Race

check if race name

addRace(name)
